

Wireless keyboard with universal remote control 2-in-1 TESLA Device WK180 is a great accessory for convenient control of smart TV, PC or multimedia center. It's also backlit, so you can see the buttons well in the dark.

AirMouse function

No more complicated arrow scrolling. With AirMouse, you'll move the on-screen cursor much more comfortably, just by moving your hand. The built-in gyroscopic sensor immediately evaluates which direction you have moved your hand and moves the cursor accordingly.

Top buttons

On the top of the TESLA Device WK180 you will find the basic most used buttons. For example, there is an on and off button, volume adjustment, home or arrows.

Full-size keyboard

The underside hides the complete keyboard in the QWERTY layout. This makes entering texts much easier thanks to the 57 keys.

Backlight

Put an end to the constant lighting just to see your old controller. Our versatile remote control with keyboard is fully backlit. So you can see the buttons even in the dark. You can even choose one of seven colors.

Integrated battery

There will no longer be a need to buy AA batteries. Power supply to this device is provided by a built-in battery, which can be recharged at any time via the included microUSB cable.

Easy installation

You don't need to install anything to use. Just plug the USB receiver into any device with a USB port and start enjoying the comfortable operation. Plug & Play technology ensures automatic installation on Windows, Linux, Android and macOS.
